Performance and availability of the solar emergency power function can be derated or may be off due to software updates, grid inverter and external conditions (e.g. house load, generation, hardware defect, temperature, battery calibration). A weekly battery calibration discharges the battery according to battery management system requirements. You will find further important information about backup/emergency power operation in the "Emergency power in the S10 home power station" information sheet at <https://www.e3dc.com/en/infocenter/#Downloads>
